

Alex Haskel

alexdhaskel@gmail.com ❖ 201-423-4317 ❖ New York, NY

EDUCATION

Hunter College | New York, NY

Expected Graduation: December 2026

B.A., Double Major: Computer Science and Mathematics.

- **GPA:** 4.0/4.0
- **Relevant Coursework:** Data Structures and Algorithms I-III, Computer Architecture I-II, Discrete Structures, Applied Statistics, Linear Algebra, Calculus I-III, Vector Calculus, Computer Theory, Number Theory, Differential Equations, Calculus Based Physics: Classical Mechanics, Abstract Algebra, Real Analysis I-II, Research in AI and Machine Learning (seminar; literature review and paper presentations), Machine Learning, Algorithm Design & Analysis.
- **Upcoming Courses (Fall 2026):** Probability Theory, Bayesian Statistics, Independent Study in Linear Algebra.
- **Honors:** Pi Mu Epsilon Mathematics Honor Society, selected as one of 10 senior inductees. **May 2026**

SKILLS

Python, C++, Pandas, ScikitLearn, PyTorch, Mathematica, SQL, LaTeX, Git, Linux/WSL (command line), Symbolic Regression (PySR), public speaking. Native fluency in Spanish.

EXPERIENCE

MIT Summer Research Program (MSRP)

May 2026 – August 2026

Computational Neuroscience Research Intern

Cambridge, MA

- Conducted research on modular neural networks under Professor Ila Fiete at the Department of Brain and Cognitive Sciences.
- Investigated the role of training data in inducing modularity in neural networks by engineering datasets exhibiting different geometries, levels of randomness, and levels of statistical association.
- Created training loops for specially regularized neural networks using PyTorch, and evaluated modularity using custom Python scripts for data generation, data analysis, and visualization.

Quantitative Methods Workshop – MIT

January 2026

Participant

Cambridge, MA

- One of seven students selected by Hunter College to attend a week-long workshop on quantitative methods in biology at MIT.

NSF REU at Iowa State University (SIMCODES)

June 2025 – August 2025

Machine Learning Research Intern

Ames, IA

- Responsible for extracting data from quantum chemistry simulations, creating a symbolic regression pipeline to improve existing equations, and creating and testing neural networks to analyze simulation data.
- Presented findings in a poster session at a university-wide symposium.

Google Software Engineering Mentorship Program (Basta SWEP)

February 2025 – May 2025

Participant

New York, NY

- Selected from a highly competitive applicant pool to engage in 10 weeks of pair programming and mentorship with a Google Software Engineer.

GranApple Tours

2021 – Present

Tour Guide

New York, NY

- Conducted 3-hour walking tours of NYC attractions in Spanish and English for groups of up to 60 tourists.
